AUDITOR'S REPORT

INDEPENDENT AUDITOR'S ISAE 3000 REPORT AT 1 MAY 2019 ON DESCRIPTION OF TECHNICAL AND ORGANISATIONAL MEASURES AND THEIR DESIGN RELATING TO PROCESSING AND PROTECTION OF PERSONAL DATA IN ACCORDANCE WITH THE EU GENERAL DATA PROTECTION REGULATION

To: The Management of Got Ethics A/S
Got Ethics A/S' Customers

Scope

We have been engaged to report on Got Ethics A/S' (the Processor) description at pages 6-9 of the Whistleblower system and related technical and organisational measures (controls) for processing of personal data on behalf of Controllers subject to the EU regulation on protection of natural persons with regard to the processing of personal data and on the free movement of such data (the General Data Protection Regulation) at 1 May 2019 (the Description) and on the design of technical and organisational measures (controls) at 1 May 2019 related to the described control objectives.

We have not performed any procedures in relation to the operating effectiveness of the controls included in the description and, accordingly, we do not express any opinion hereon.

The Processor's Responsibilities

At page 4 of this report, the Processor has made a statement on the suitability of the overall presentation of the description.

The Processor is responsible for preparing the description and accompanying statement, including the completeness, accuracy, and method of presenting the description and the statement. Furthermore, the Processor is responsible for providing the services covered by the description; stating the control objectives; and designing and implementing controls to achieve the stated control objectives.

Service Auditor's Independence and Quality Control

We have complied with the independence and other ethical requirements of the FSR - "Code of Ethics for Danish Professional Accountants" which is based on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional conduct.

We are subject to the international standard on quality control, ISQC 1, and apply and maintain a comprehensive system for quality control, including documented policies and procedures for complying with rules of ethics, professional standards and applicable requirements according to legislation and other regulation.

Service Auditor's Responsibilities

Our responsibility is to express an opinion on the Processor's description and on the design of the controls related to the control objectives stated in the description. We conducted our engagement in accordance with ISAE 3000, Assurance Reports Other Than Audits or Reviews of Historical Financial Information and additional requirements according to relevant Danish legislation. That standard requires that we plan and perform our procedures to obtain reasonable assurance about whether, in all material respects, the description is fairly presented and the controls are suitably designed.

An assurance engagement to report on the description and design of controls at a Processor involves performing procedures to obtain evidence about the disclosures in the Processor's description of its system, and the design of controls. The procedures selected depend on the service auditor's judgment, including the assessment of the risks that the description is not fairly presented, and that controls are not suitably designed. An assurance engagement of this type also includes evaluating the overall presentation of the description, the suitability of the objectives stated therein, and the suitability of the criteria specified by the Processor and described at page 4.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

As described above, we have not performed any procedures in relation to the operating effectiveness of the controls included in the description and, accordingly, we do not express any opinion hereon.

Limitations of Controls at a Processor

The Processor's description is prepared to meet the common needs of a wide range of Controllers and may not, therefore, include every aspect of the system that each individual Controller may consider important in their own particular environment. Also, because of their nature, controls at a Processor may not prevent or detect all breaches of the personal data security.

Opinion

Our opinion has been formed on the basis of the matters outlined in this report. The criteria we used in forming our opinion are those described at page 4. In our opinion, in all material respects:

- (a) The description presents fairly the Whistleblower system and related technical and organisational measures (controls) as designed and implemented at 1 May 2019; and
- (b) The technical and organisational measures (controls) related to the control objectives stated in the description were suitably designed at 1 May 2019.

Description of Tests of Controls

The specific controls tested and the nature, timing and results of those tests are listed at pages 11 - 60.

Intended Users and Purpose

This report, including the description of tests of controls at pages 11 - 60, is intended only for the Controllers, who have used the Processor's Whistleblower system, and who have a sufficient understanding to consider it, along with other information including information about controls operated by the Controllers themselves, when assessing whether the requirements of the General Data Protection Regulation are fulfilled.

STATEMENT BY GOT ETHICS A/S

Got Ethics A/S is responsible for processing of personal data of our customers, who are Controllers according to the Regulation of the European Parliament and of the Council on the protection of natural persons with regard to the processing of personal data and on the free movement of such data (the EU General Data Protection Regulation) and the Danish Act on Supplementary Provisions.

The following description is intended for Controllers using the Whistleblower system, and who have a sufficient understanding to consider the description along with other information, including information about controls operated by the Controllers themselves, when assessing whether the requirements of the EU General Data Protection Regulation and the Danish Act on Supplementary Provisions are fulfilled.

Got Ethics A/S confirms that the accompanying description at pages 6-9 presents fairly the Whistleblower system, which has processed personal data for Controllers subject to the EU General Data Protection Regulation, and the related technical and organisational measures (controls) at 1 May 2019. The criteria we used in making this statement were that we:

1. Account for the design and implementation of the Whistleblower system and the related technical and organisational measures (controls), including:
 - The type of services provided, including the type of personal data processed.
 - The processes of both IT and manual systems used to process personal data, such as collection, recording, structuring, storage, adaption or alteration, retrieval, consultation, use, disclosure by transmission, dissemination, alignment or combination, restriction, erasure or destruction.
 - The processes used to ensure data processing in accordance with contract, instruction or agreement with the Controller.
 - The processes ensuring that the persons authorised to process personal data have a duty of confidentiality.
 - The processes ensuring at the completion of the data processing that all personal data are, as elected by the controller, erased or returned to the controller unless legislation or regulation prescribes retention of the personal data.
 - The processes that in case of breach of the personal data security ensure that the controller can file a report to the supervisory authority and inform the data subjects.
 - The processes ensuring appropriate technical and organisational measures for the processing of personal data with due regard to the risks that the processing involves, especially as regards accidental or unlawful destruction, loss, alteration, unauthorised disclosure of or access to personal data that are transmitted, stored or otherwise are processed.
 - Technical and organisational measures (controls) that we have assumed, with reference to the design of the Whistleblower system, to be implemented by the controllers and which, if necessary to achieve the control objectives described, are identified in the description.
 - Other aspects of our control environment, risk assessment process, and communication, control activities and monitoring controls that have been relevant to the processing of personal data.
2. Do not omit or distort information relevant to the scope of the described Whistleblower system and the related technical and organisational measures (controls) for processing of personal data considering that the description is prepared to meet the general needs of a wide range of Controllers and therefore cannot include every aspect of the Whistleblower system that the individual Controller may consider of importance to their special environment.

Got Ethics A/S confirms that the technical and organisational measures (controls) related to the control objectives stated in the accompanying description were suitably designed at 1 May 2019. The criteria we used in making this statement were that:

1. The risks threatening achievement of the described control objectives were identified.
2. The identified controls would, if operated as described, provide reasonable assurance that those risks did not prevent the stated control objectives from being achieved.

Got Ethics A/S confirms that appropriate technical and organisational measures are implemented to fulfil the agreements with the controllers, good practices for the processing of data, and relevant requirements in relation to processors in accordance with the EU General Data Processing Regulation and the Danish Act on Supplementary Provisions

Copenhagen 2 May 2019

Got Ethics A/S

Jesper Dannemann
COO, Master of Laws

GOT ETHICS A/S' DESCRIPTION

Introduction

Got Ethics A/S is a company providing software products to our customers.

Got Ethics A/S has 2 offices. The general management and the consulting/implementation function reside in the Copenhagen office. The IT development/operating department reside in the office in Holstebro.

Got Ethics A/S' main product is a whistleblowing solution. The whistleblowing solution is a platform where whistleblowers can submit incidents to a web-based case management system where the incidents are handled by case investigators appointed by Got Ethics A/S' customers. It is possible for the case investigators to engage into a dialogue with the whistleblowers in a way where the identity of the whistleblower is not revealed to the case investigators.

Got Ethics A/S has been providing whistleblowing solutions to our customers since 2011.

The basic version of the whistleblowing system contains a web-based reporting portal and a web-based case management system. Furthermore, the customers can purchase the following add-on products:

- Smart phone apps as a separate reporting channel.
- Phone hotline as a separate reporting channel.
- Translation service where reported incidents and uploaded documents can be translated by an independent translation company.
- Translation service where reported incidents can be translated by a machine translation service provided by Microsoft Azure.

The whistleblowing system contains personal data used for identifying the Informant and/or the person(s) who are involved in the incidents reported in the system, e.g. name, address, email, telephone number, etc. Furthermore, the whistleblowing system contains information on criminal offences and suspicion of criminal offences.

The personal data being processed by the whistleblowing system and the related manual processes are subject processing activities such as collection, recording, structuring, storage, adaption or alteration, retrieval, consultation, use, disclosure by transmission, dissemination, alignment or combination, restriction, erasure or destruction.

It is essential to Got Ethics A/S' management to maintain full focus on information security to ensure that the implemented controls are effective and meets generally accepted standards for information security. The implemented information security measures are assessed regularly, and it is evaluated whether they need to be adjusted.

To emphasize that information security is an important matter to Got Ethics A/S, it has been decided to obtain an assurance report from an independent auditor.

The System

The system is a SaaS (Software as a Service) - which is an internet-based application hosted by Got Ethics A/S.

The system consists of several reporting interfaces and an administrator portal. Furthermore, 2 different translation services can be acquired as add-on services.

Below, the following terms are used:

- "Customers" are Got Ethics A/S customers who have purchased a license to use the system.
- "Informants" are whistleblowers etc. submitting incidents to the Customers through the system.
- "Incidents" are knowledge or suspicion about unethical or criminal behavior submitted in the system by Informants. Incidents are submitted to the case management system (administrator portal) by the Customers' employees and/or business relations/business partners.
- "Case Investigators" are persons appointed by the Customer (typically employees) who receive the Incidents, investigate the Incident and communicates with the Informant if necessary.

Reporting Interfaces

Web Portal

Incidents can anonymously (or not anonymously) be reported on a SSL encrypted web form. The Incidents (HTML) are sent to the case management system in the administrator portal where they are stored encrypted.

Logging of IP addresses has been disabled on the web server to protect the identity of the Informant.

The communication between the Informant and the Case Investigators is done anonymously (or not anonymously) via the web portal on a SSL encrypted web form.

Smartphone Apps for iPhone and Android

Incidents can anonymously (or not anonymously) be reported via an app.

The Incidents (text/voice/movie) are sent encrypted to the case management system in the administrator portal where it is stored encrypted.

Voice messages sent through the app are obfuscated irreversibly to protect the identity of the Informant.

The communication between the Informant and the Case Investigators is done (encrypted) anonymously (or not anonymously) via the app.

The app is an add-on product that can be purchased separately and is tailor made to each Customer.

Phone Hotline

Incidents can be reported through a phone hotline (recording of voice messages).

Voice messages recorded via the phone hotline are obfuscated irreversibly to protect the identity of the Informant and stored encrypted in the case management system in the administrator portal.

The communication between the Informant and the Case Investigators is done via an interface between the administrator portal (Case Investigators) and a telephone number (Informant) with an IVR menu system. Questions from the Case Investigators are read aloud to the informant via speech synthesis (Microsoft Speech API). Answers and further comments are recorded as a voice message by the Informant.

The phone hotline is an add-on product that can be purchased separately by each Customer.

Administrator Portal

In the system's administrator portal, the customer's Case Investigators/administrator users can perform the case management.

Furthermore, the system settings (including the security settings) can be configured in the administrator portal.

All sensitive personal data in the customers' whistleblowing systems is encrypted while in transit and at rest with a customer-specific encryption key that is kept by the Customer. None of Got Ethics A/S' employees (even the systems developers) can decrypt the encrypted sensitive personal data stored in the Customers' systems.

Translation Service

Customers can include a translation service where reported Incidents and uploaded documents are translated to other languages.

Manual Translation

The translation is performed in an interface in the system by an independent translation company. The translation service is carried out by translators who are approved by the Danish police authorities.

Translations are performed in Got Ethics A/S' IT infrastructure via remote desktop connections. This way it can be ensured that all sensitive information is stored in a protected environment at all times where

the appropriate security measures have been implemented. It is not possible for the translators to copy information from the remote desktop.

Machine Translation

The translation is performed by Microsoft Translator Text API v3.0. The translated texts are neither stored nor used for machine learning purposes.

The Customers' Responsibility

It is set out in the service contract between the customer and Got Ethics A/S that it is the responsibility of the customer to:

- Review the transaction log regularly,
- Ensure that the password policy configured in the system complies with the requirements of the regulation of processing of personal data relating to complexity, periodic password change, and temporary suspension of logins in case of unsuccessful login attempts (brute force settings),
- Implement procedures for deletion of transaction log and sensitive personal data in accordance with the guidelines of the regulation of processing of personal data,
- Cancel systems access for leaving employees and, in the situation where an employee changes to a job where the relevant person is not to have access to the system.

Identification and Assessment of Risks and Implementation of Controls

Got Ethics A/S' management has analysed the risks relating to the system. A business continuity risk assessment as well as a data protection impact assessment has been conducted.

The business continuity risk assessment is based on identification of the risks, how likely the situations generating the risks are to occur and what the impact would be for Got Ethics A/S if the situations should occur.

The data protection impact assessment is based on the article 29 data protection working party's guidelines. The assessment identifies the processes where personal data are being processed and assesses what the consequences would be for the affected data subjects if the processed personal data should be compromised.

The risk assessments are being conducted (reassessed) with regular intervals and furthermore if an event should occur that would make it appropriate to conduct a reassessment.

Based on the risk analysis, the management has defined the relevant control objectives and implemented the necessary and sufficient controls to ensure that the system complies with the requirements set out in the general data protection regulation and follows the framework set out in ISO 27001.

The main areas and control objectives are described below. A full list of control objectives and selected controls are amended as an appendix to the audit report.

Main areas and Control objectives:

Main areas ISO 27001	Control objectives
A.5 Security Policies	<ul style="list-style-type: none"> • To provide guidelines for and supporting information security in accordance with business requirements and relevant laws and regulations. GDPR article 28(1), article 28(3), para c.
A.6 Organisation of information security	<ul style="list-style-type: none"> • To establish a management basis for initiating and managing the implementation and operation of information security in the organisation. GDPR article 37(1). • To secure remote workplaces and the use of mobile equipment. GDPR article 28,(3), para c.
A.7 Human resource security	<ul style="list-style-type: none"> • To ensure that employees understand their responsibilities and are suitable for the roles they are intended. GDPR article 28(1), article 28(3), article 37(1). • To ensure that employees are aware of and meet their information security responsibilities. GDPR article 28(1), article 28(3), para c. • To protect the organisation's interests as part of the change or termination of the employment relationship. GDPR article 28(3), para b.
A.8 Responsibility for assets	<ul style="list-style-type: none"> • To identify the organisation's assets and define appropriate responsibilities for its protection. GDPR article 30(2), article 30(3), article 32(2).

	<ul style="list-style-type: none"> To ensure adequate protection of information that is in relation to the importance of the information for the organisation. GDPR article 30(3), article 30(4). To prevent unauthorised disclosure, modification, removal or destruction of information stored on media. GDPR article 28(3), para c.
A.9 Access control	<ul style="list-style-type: none"> To restrict access to information and information processing facilities. GDPR article 28(3), para c. To ensure access for authorised users and prevent unauthorised access to systems and services. GDPR article 28(3), para c. To make users responsible for securing their authentication information. GDPR article 28(3), para c. To prevent unauthorised access to systems and applications. GDPR article 28(3), para c.
A.10 Cryptography	<ul style="list-style-type: none"> To ensure the correct and effective use of cryptography to protect the confidentiality, authenticity and / or integrity of information. GDPR article 28(3), para c.
A.11 Physical and Environmental security	<ul style="list-style-type: none"> To prevent unauthorised physical access to, and damage/disruption of the organisation's information and information processing facilities. GDPR article 28(3), para c. To avoid loss, damage, theft or compromise of assets and disruptions in the organisation. GDPR article 28(3), para c.
A.12 Operations security	<ul style="list-style-type: none"> To ensure proper and safe operation of information processing facilities. GDPR article 25, article 28(3), para c. To ensure that information and information processing facilities are protected against malware. GDPR article 28(3), para c. To protect against data loss. GDPR article 28(3), para c. To record events and provide evidence. GDPR article 33(2). To ensure the integrity of operating systems. GDPR article 28(3), para c. To prevent technical vulnerabilities being exploited. GDPR article 28(3), para c. To minimise the impact of audit activities on operating systems. GDPR article 28(1).
A.13 Communications security	<ul style="list-style-type: none"> To ensure protection of network information and supportive information processing facilities. GDPR Article 28(3), para c. To maintain information security when transferring internally in an organisation and to an external entity. GDPR Article 28(3), para c.
A.14 System acquisition, development and maintenance	<ul style="list-style-type: none"> To ensure that information security is an integral part of information systems throughout the life cycle. This also includes the requirements for information systems that provide public network services. GDPR article 25. To ensure that information security is organised and implemented within the information systems development life cycle. GDPR article 25. To ensure the protection of data used for testing. GDPR article 25.
A.15 Supplier relationships	<ul style="list-style-type: none"> To ensure protection of the organisation's assets that suppliers have access to. GDPR article 28(2), article 28(3), para d, article 28(4). To maintain an agreed level of information security and delivery of services under the supplier agreements. GDPR article 28(2), article 28(3), para d, article 28(4).
A.16 Information security incident management	<ul style="list-style-type: none"> To ensure a uniform and effective method of managing information security breaches, including communication on security incidents and weaknesses. GDPR article 33(2).
A.17 Information security aspects of business continuity	<ul style="list-style-type: none"> To ensure that information security continuity is rooted in the organisation's management systems for emergency and re-establishment. GDPR article 28(3), para c. To ensure accessibility of information processing facilities. GDPR article 28(3), para c.
A.18 Compliance	<ul style="list-style-type: none"> To prevent violations of statutory, regulatory or contractual requirements in relation to information security and other security requirements. GDPR article 25, article 28(2), article 28(3), para a, article 28(3), paras e, g, f and h, article 28(10), article 29, article 32(4), article 33(2). To ensure that information security is implemented and run in accordance with the organisation's policies and procedures. GDPR article 28(1).
A.20 App reporting channel	<ul style="list-style-type: none"> To ensure secure capture, storage and processing of incidents via the smartphone apps for iPhone and Android (GDPR Article 28, section 3, letter c).
A.20 Phone hotline	<ul style="list-style-type: none"> To ensure secure capture, storage and processing of incidents (voice messages) via the phone hotline solution (GDPR Article 28, section 3, letter c).
A.20 Translation service	<ul style="list-style-type: none"> To ensure that all information processed by translators are processed in a secure manner (GDPR Article 28, section 3, letter c).

CONTROL OBJECTIVES, CONTROLS, TESTS AND RESULT OF TESTS

In the following, the relevant control objectives and implemented control activities, designed to achieve the control objectives, are described and selected by Got Ethics A/S.

We have described the tests performed that were considered necessary to obtain reasonable assurance that the described control objectives were achieved, and that the relevant controls were implemented at 1 May 2019.

The tests of the design and implementation of controls were performed by inquiries, inspection and observation.

Type	Description
Inquiry	<p>Inquiries of relevant personnel at Got Ethics A/S have been performed for all significant control activities.</p> <p>The purpose of the inquiries was to obtain knowledge and further information about implemented policies and procedures, including how the control activities are performed, and to obtain confirmed evidence of policies, procedures and controls.</p>
Inspection	<p>Documents and reports, which include information about the performance of the control, have been read for the purpose of assessing the design and monitoring of the specific controls, ie whether the design of the controls is such that they are expected to be effective if implemented, and whether the controls are sufficiently monitored and checked at suitable intervals.</p> <p>Tests have been performed of significant system structures of technical platforms, databases and network equipment to ensure that controls have been implemented, including for example assessment of logging, back-up, patch management, authorisations and access controls, data transmission, and inspection of equipment and locations.</p>
Observation	<p>The use and existence of specific controls has been observed, including tests to ensure that the control has been implemented.</p>

With respect to the services provided by Microsoft Corporation - Microsoft Azure (Germany) and Microsoft Azure (Azure & Azure Government), we have received SOC 2 reports from independent auditor on controls related to the operation and hosting services for the period from 1 January 2018 to 31 December 2018 and an ISO 27001:2013 certificate for Microsoft Deutschland MCIO GmbH for the following areas: Infrastructure, Development, Security and engineering services/systems, Operations, Data trustee controls and Support for the following Azure Services in accordance with Microsoft Germany Azure ISMS Statement of Applicability 2017.02, dated 1 June 2017 and valid from 19 January 2017 to 18 January 2020 and certified by TÜV NORD CERT GmbH.

With respect to the services provided by Cogeco Peer 1 in Canada, we have received a SOC 1 / SSAE 18 report from independent auditor on IT general controls related to the operation and hosting services for the period from 1 July 2017 to 30 June 2018.

With respect to the services provided by Supertel A/S, we have received an ISAE 3402 type II report from independent auditor on IT general controls related to the operation and hosting services for the period from 1 January to 31 December 2018.

The relevant control objectives and controls of these service sub-organisations are not included in Got Ethics A/S' description of services and controls related to the operation of the Whistleblower system. Thus, we have solely considered the report and tested the controls at Got Ethics A/S which monitor the functionality of the service sub-organisations' controls.

A.5: Security Policies - Management direction for information security**Control Objective**

- To provide guidelines for and supporting information security in accordance with business requirements and relevant laws and regulations. GDPR article 28(1), article 28(3), para c.

Control Activity	Test performed by BDO	Result of test
Establish policies for information security <ul style="list-style-type: none"> An Information Security Policy has been implemented. 	<p>We have made inquiries of relevant personnel and inspected the "Information Security Policy" and "Code of Good Information Security Behavior".</p> <p>We have observed that "Code of Good Information Security Behavior" is signed by all employees with access to the IT infrastructure in March 2019.</p>	No deviations identified.
Periodical review of the policies for information security <ul style="list-style-type: none"> Procedures have been implemented to ensure periodic reviews of the Information Security Policy. 	<p>We have made inquiries of relevant personnel.</p> <p>We have inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Business Continuity Risk Assessment", "Data Protection Impact Assessment" and "Code of Good Information Security Behavior".</p> <p>We have inspected the latest periodic review of policies for information security from 23 April 2019 carried out by the Information Security Committee.</p> <p>We have observed that the "Information Security Policy", "Business Continuity Risk Assessment" and "Data Protection Impact Assessment" are reviewed and approved in March 2019.</p>	No deviations identified.

A.6: Organisation of Information Security - Internal organisation, mobile devices and teleworking**Control Objective**

- To establish a management basis for initiating and managing the implementation and operation of information security in the organisation. GDPR article 37(1).
- To secure remote workplaces and the use of mobile equipment. GDPR article 28,(3), para c.

Control Activity	Test performed by BDO	Result of test
Establish information security roles and responsibilities <ul style="list-style-type: none"> • Procedures have been implemented to ensure that the roles and responsibilities are defined and communicated to the employees. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls and "Code of Good Information Security Behavior".</p> <p>We have observed that "Code of Good Information Security Behavior" is signed by all employees with access to the IT infrastructure in March 2019.</p>	No deviations identified.
Segregation of duties <ul style="list-style-type: none"> • Segregation of the groups working with the test, development and production environment have been implemented to the extent possible. • Actions performed by employees in the production environment are logged. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls and "Information Security Policy" and "Information Security in Project Management".</p> <p>We have observed that segregation of duties is managed by using groups and that the test, development and production environments are placed at different servers in different environments.</p> <p>We have observed that there are logging of actions performed by employees in the production environment.</p>	No deviations identified.
Contact with special interest groups <ul style="list-style-type: none"> • Periodic contact with information security specialists to exchange ideas and get input regarding information security. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls and "Periodic Review Report".</p> <p>We have observed that the security specialists at the Processor periodically exchange ideas and input regarding the information security.</p>	No deviations identified.
Implement information security in project management <ul style="list-style-type: none"> • Procedures have been implemented to ensure that information security implications are considered in project management. • Periodic discussions related to information security implications. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Information Security in Project Management".</p>	No deviations identified.

A.6: Organisation of Information Security - Internal organisation, mobile devices and teleworking

Control Objective

- To establish a management basis for initiating and managing the implementation and operation of information security in the organisation. GDPR article 37(1).
- To secure remote workplaces and the use of mobile equipment. GDPR article 28,(3), para c.

Control Activity	Test performed by BDO	Result of test
<ul style="list-style-type: none"> • Addressing information security risks are integrated in the programming assignments. 	<p>We have inspected the documentation for the recent project and Build. We have made inquiries of relevant development personnel regarding projects and Builds.</p> <p>We have observed that the security specialists at the Processor periodically discuss related information security implications.</p> <p>We have observed that addressed information security risks are an integrated part of the programming assignments.</p>	
<p>Mobile device policy</p> <ul style="list-style-type: none"> • A policy for the use of mobile devices have been implemented. • Access restriction requirements. • Installation of anti-virus, anti-malware programs and software firewall. • Updating of operating systems. • Internet access via secure lines. • Encryption when transferring sensitive data. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Policy for use of Mobile devices".</p> <p>We have observed that the Processor has a policy for use of mobile devices and remote access and that these are known by the employees. We have observed that all employees have signed the "Code of Good Information Security Behavior"</p> <p>We have by interviews and walk-through of mobile devices and configuration observed that:</p> <ul style="list-style-type: none"> • There are access restrictions to mobile devices by passwords and the devices are locked after inactivity laptop after 10 minutes and mobile phones after 1 minute. • Anti-virus and malware programs and software firewall are installed. • The software must at all times be updated at mobile devices. This is the employees' responsibility. • USB-mobile devices must be encrypted by using 7-zip using AES-256 encryption. • The Processor uses secure lines by using RDS. <p>We have selected laptops and mobile phones and observed that they were updated and that the employees use internal encryption keys when transferring sensitive data.</p>	No deviations identified.

A.6: Organisation of Information Security - Internal organisation, mobile devices and teleworking

Control Objective

- *To establish a management basis for initiating and managing the implementation and operation of information security in the organisation. GDPR article 37(1).*
- *To secure remote workplaces and the use of mobile equipment. GDPR article 28,(3), para c.*

Control Activity	Test performed by BDO	Result of test
<p>Teleworking</p> <ul style="list-style-type: none"> • A policy for teleworking and remote access have been implemented. • No storing of sensitive data on remote workplaces. • Secure access to files. • Secure remote access for developers. • Requirements to install anti-virus, anti-malware programs and software firewall. • Secure remote access to the production environment. • Commitment to the Code of Good Information Security Behavior. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Policy for Teleworking and Remote Access".</p> <p>We have observed that the Processor has a policy for use of teleworking and remote access and that these are known by the employees. We have observed that all employees have signed the "Code of Good Information Security Behavior".</p> <p>We have by interviews and walk-through of teleworking and configuration observed the following:</p> <ul style="list-style-type: none"> • The Processor has a policy for not storing sensitive data on remote workplaces; we have observed that employees are aware of that. • For access to company files the employees have to use Remote Desktop (RDS) to access data, which are hosted on Office 365 SharePoint. • The Processor uses secure lines by using VPN and RDS. We have observed that the remote connection has to be established from a dedicated work computer, and that a certificate has to be installed on that computer. • We have inspected the configuration of RDS for selected employees and observed that they only have the access rights needed. • Anti-virus and malware programs and software firewall are installed. The software must at all times be updated. The "Production Environment Access Group" is responsible for managing these updates. 	<p>No deviations identified.</p>

A.7: Human Resource Security - Prior to, during and termination and change of employment		
Control Objective <ul style="list-style-type: none"> To ensure that employees understand their responsibilities and are suitable for the roles they are intended. GDPR article 28(1), article 28(3), article 37(1). To ensure that employees are aware of and meet their information security responsibilities. GDPR article 28(1), article 28(3), para c. To protect the organisation's interests as part of the change or termination of the employment relationship. GDPR article 28(3), para b. 		
Control activity	Test performed by BDO	Result of test
Screening <ul style="list-style-type: none"> Personal interview. Investigation of criminal records. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and criminal records for employees.</p> <p>According to the procedures, the Processor interviews the employee to be and check the background e.g. with former employer and asks for a copy of criminal records.</p> <p>We have observed that the Processor has received criminal records from their employees.</p>	No deviations identified.
Terms and conditions of employment <ul style="list-style-type: none"> The terms and the conditions of the employment are set out in: <ul style="list-style-type: none"> An employment contract. A non-disclosure undertaking. A Code of Good Information Security Behavior. The Information Security Policy. Awareness campaigns towards the Processors employees are performed several times a year to ensure continuous focus on data protection and security. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior", "Non-disclosure Undertaking" and "Employment Contract".</p> <p>We have inspected:</p> <ul style="list-style-type: none"> The terms and conditions of employment. The standard employment contract and the contract for an employee. <p>We have observed that:</p> <ul style="list-style-type: none"> Non-disclosure undertaking is signed by all employees. Code of Good Information Security Behavior are signed by all employees. All employees must read and agree to the Information Security Policy. 	No deviations identified.
Management responsibilities <ul style="list-style-type: none"> Implemented a policy for communication and management of information security responsibilities involving the general management and the managers. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls and "Information Security Policy".</p>	No deviations identified.

Control activity	Test performed by BDO	Result of test
	We have observed that the information Security Policy is signed by the Information Security Committee.	
Disciplinary process <ul style="list-style-type: none"> The consequences of violating the employment contract and the information security policies are set out in the employment contract and the Code of Good Information Security Behavior. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls and "Information Security Policy".</p> <p>We have observed that:</p> <ul style="list-style-type: none"> Consequences of violation of the employment contract and the "Information Security Policy" are set out in the Employment contract and the "Code of Good Information Security Behavior" "Code of Good Information Security Behavior" is signed by all employees yearly. 	No deviations identified.
Termination or change of employment responsibilities <ul style="list-style-type: none"> Employees are bound by the non-disclosure undertaking after the termination. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior", "Non-disclosure Undertaking", "Employment Contract" and documentation for dismissed employees.</p> <p>We have inspected the master for revocation of access to IT systems and revocation of assets and keys.</p>	No deviations identified.

A.8: Responsibility for Assets - Information classification and media handling**Control Objective**

- To identify the organisation's assets and define appropriate responsibilities for its protection. GDPR article 30(2), article 30(3), article 32(2).
- To ensure adequate protection of information that is in relation to the importance of the information for the organisation. GDPR article 30(3), article 30(4).
- To prevent unauthorised disclosure, modification, removal or destruction of information stored on media. GDPR article 28(3), para c.

Control Activity	Test performed by BDO	Result of test
Inventory of assets <ul style="list-style-type: none"> • An inventory of information assets has been established. • The responsibility to maintain the inventory have been defined. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Information Assets".</p> <p>We have observed that the Processor has established an inventory of information assets and it is updated in April 2019.</p> <p>We have observed that it is the "Information Asset Group" that has the responsibility for maintaining the list of inventory.</p>	No deviations identified.
Ownership of assets <ul style="list-style-type: none"> • The ownership (responsibility to manage and maintain) of information assets have been identified for all information assets. • The responsibility to maintain the list of information asset ownership has been appointed. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Information Assets".</p> <p>We have observed that the "Information Asset Group" has the responsibility for maintaining the list of inventory and we have been informed that it contains all the information assets of the Processor.</p>	No deviations identified.
Acceptable use of assets <ul style="list-style-type: none"> • An acceptable use of assets policy has been incorporated in the Code of Good Information Security Behavior. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Code of Good Information Security Behavior".</p> <p>We have observed that "Code of Good Information Security Behavior" contains acceptable use of assets policy and that all employees have signed this document in March 2019.</p>	No deviations identified.

A.8: Responsibility for Assets - Information classification and media handling

Control Objective

- To identify the organisation's assets and define appropriate responsibilities for its protection. GDPR article 30(2), article 30(3), article 32(2).
- To ensure adequate protection of information that is in relation to the importance of the information for the organisation. GDPR article 30(3), article 30(4).
- To prevent unauthorised disclosure, modification, removal or destruction of information stored on media. GDPR article 28(3), para c.

Control Activity	Test performed by BDO	Result of test
Return of assets <ul style="list-style-type: none"> • A procedure has been implemented for retrieving information assets from employees in case of termination of the employment. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Revocation of Assets" and "Inventory of Information Assets".</p> <p>We were informed that no employees have resigned since January 2018. Thus, we were not able to verify that the procedure of retrieving information assets from employees in case of termination has been implemented.</p>	No deviations identified.
Classification of information <ul style="list-style-type: none"> • The different information handled and managed by the organisation have been identified and separated in categories reflecting the consequences if the information was compromised. • Appropriate measures have been implemented to protect the information taking into account the classification of the information. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Information Assets".</p> <p>We have observed that the Processor has established an inventory of information assets from which it follows who is responsible.</p> <p>We have been informed that the Processor has divided breaches of information as follows:</p> <ol style="list-style-type: none"> 1. Information that has no or little consequences. 2. Information that would not be critical to the company but would have some impact. 3. Information that would have critical business impact - short term. 4. Information that would be critical to survival of the company - long term. <p>We have observed that the data in classification categories 2-4 are encrypted and most of the data in classification category 1 are encrypted as well.</p>	No deviations identified.

A.8: Responsibility for Assets - Information classification and media handling**Control Objective**

- To identify the organisation's assets and define appropriate responsibilities for its protection. GDPR article 30(2), article 30(3), article 32(2).
- To ensure adequate protection of information that is in relation to the importance of the information for the organisation. GDPR article 30(3), article 30(4).
- To prevent unauthorised disclosure, modification, removal or destruction of information stored on media. GDPR article 28(3), para c.

Control Activity	Test performed by BDO	Result of test
Record of categories of processing activities <ul style="list-style-type: none"> • The Processor prepares a record of categories of processing activities made on behalf of the Controllers. • The record is updated regularly and checked during the annual review of policies and procedures, etc. • The record is kept electronically. • The Processor makes the record available to the supervisory authority on request. 	<p>We have made inquiries of relevant personnel and inspected "Inventory of Customers" and "Inventory of Processing Operations".</p> <p>We observed that the record is updated periodically and stored electronically.</p>	No deviations identified.
Labelling of information <ul style="list-style-type: none"> • Procedures have been implemented to ensure appropriate labelling of information assets during transfer. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Information Assets".</p> <p>We have observed that the data in classification categories 2-4 are encrypted and most of the data in classification category 1 are encrypted as well - during transfer.</p> <p>We have observed when the employees are sharing sensitive data by using internal key passes and passwords.</p>	No deviations identified.
Handling of assets <ul style="list-style-type: none"> • A procedure for handling assets have been implemented to ensure correct classification of the information, compliance with the access control policy, correct registration and appropriate storage. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Information Assets".</p> <p>We have observed that to ensure segregation of duties the Processor has implemented a strong password policy by using 2-factor authentication, complexity and ensured that the employee only has access to what is necessary to fulfil his/hers work.</p>	No deviations identified.

A.8: Responsibility for Assets - Information classification and media handling**Control Objective**

- To identify the organisation's assets and define appropriate responsibilities for its protection. GDPR article 30(2), article 30(3), article 32(2).
- To ensure adequate protection of information that is in relation to the importance of the information for the organisation. GDPR article 30(3), article 30(4).
- To prevent unauthorised disclosure, modification, removal or destruction of information stored on media. GDPR article 28(3), para c.

Control Activity	Test performed by BDO	Result of test
Management of removable media <ul style="list-style-type: none"> • A procedure for storing information on removable media have been implemented to ensure that sensitive information is not compromised. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Inventory of Information Assets".</p> <p>We have observed that the Processor has a procedure for storing of information on removable media to ensure that sensitive data are saved.</p>	No deviations identified.
Disposal of media <ul style="list-style-type: none"> • A procedure has been implemented for deleting sensitive information on media in connection of the disposal of the media. • The responsibility for secure disposal of media has been appointed. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Inventory of Information Assets".</p> <p>We have observed that the Processor has a procedure for deleting sensitive information on media before disposal.</p>	No deviations identified.
Physical media transfer <ul style="list-style-type: none"> • A procedure has been implemented to ensure secure transfer of physical media. • Only use of recognised and professional couriers. • Appropriate labelling of the media. • Securing sensitive data during the transfer of the media. • Secure storing during the transfer to avoid destruction of the media. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Inventory of Information Assets".</p> <p>We have observed that the Processor has a procedure for physical media transfer. We have observed encrypted customer data.</p> <p>We have observed that "Cryptographic Key Management Group" has checked and found that the Cryptographic Technologies were adequate and appropriate at 29 March 2019 for:</p> <ul style="list-style-type: none"> • Passwords • Encryption of sensitive data in transit • Encryption of sensitive data at rest <p>We have observed that the procedure for physical media transfer is known by the employees.</p>	No deviations identified.

A.9: Access Control		
Control Objective <ul style="list-style-type: none"> To restrict access to information and information processing facilities. GDPR article 28(3), para c. To ensure access for authorised users and prevent unauthorised access to systems and services. GDPR article 28(3), para c. To make users responsible for securing their authentication information. GDPR article 28(3), para c. To prevent unauthorised access to systems and applications. GDPR article 28(3), para c. 		
Control Activity	Test performed by BDO	Result of test
Access control policy <ul style="list-style-type: none"> A policy for access control and access to networks has been implemented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Code of Good Information Security Behavior".</p> <p>We have observed that the Processor has implemented access control policy for access to networks.</p>	No deviations identified.
Access to networks and network services <ul style="list-style-type: none"> Employees only have access to the systems and networks they need to fulfil their job (need to know principle). Approval procedure implemented determining who is authorised to grant/revoke access to networks and network services. Use of VPN, 2 factor authentication and similar authorisation mechanisms where appropriate. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Code of Good Information Security Behavior".</p> <p>We have observed that the Processor has implemented different roles and accesses to the IT infrastructure and systems and the employees have only the access they need to fulfil their job.</p> <p>We have observed that the "Production Environment Access Group" has admin rights to give access in the network and network services.</p> <p>We have observed that the Processor uses VPN/RDS with 2-factor authentication for remote access.</p>	No deviations identified.
User registration and de-registration <ul style="list-style-type: none"> Procedure for creation of new used IDs has been implemented. Use of unique user IDs. Reuse of deleted user IDs requires reconfiguring of all access rights etc. User IDs for employees leaving the organisation are revoked immediately (regarding user IDs in the Whistleblower system, this obligation lies with the customer). 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Non-disclosure Undertaking".</p> <p>We have observed that the Processor has procedures for creating new users with unique user IDs and that it is not allowed to reuse deleted users' IDs.</p>	No deviations identified.

A.9: Access Control		
Control Objective <ul style="list-style-type: none"> To restrict access to information and information processing facilities. GDPR article 28(3), para c. To ensure access for authorised users and prevent unauthorised access to systems and services. GDPR article 28(3), para c. To make users responsible for securing their authentication information. GDPR article 28(3), para c. To prevent unauthorised access to systems and applications. GDPR article 28(3), para c. 		
Control Activity	Test performed by BDO	Result of test
	We were informed that no employees have resigned since January 2018. Thus, we were not able to verify that the procedure for revoking of access rights has been implemented.	
User access provisioning <i>Got Ethics</i> <ul style="list-style-type: none"> Procedure for provisioning and revocation of user IDs has been implemented. Responsibility for the appointment of user IDs has been allocated. Central registration of access rights. Periodic review. <i>The Whistleblower system</i> <ul style="list-style-type: none"> The user access provisioning is solely conducted by the customer. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Non-disclosure Undertaking".</p> <p>We have observed that procedures for user access provisioning have been implemented.</p> <p>We have received documentation for the recent periodic review carried out by the IT Security Committee at 23 April 2019.</p> <p>We have observed that the Processor has verification of employees' identities.</p> <p>We have observed that the user access provisioning in the Whistleblower system is conducted by the customer.</p>	No deviations identified.
Management of privileged access rights <ul style="list-style-type: none"> The number of users with privileged access rights in production systems has been reduced to the extent possible. The possibility of using privileged access rights in production systems has been reduced to the extent possible. Logging of actions performed by users with privileged access rights in production systems have been implemented to the extent possible. Users with privileged access rights to production systems are registered and must be approved to the management. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Non-disclosure Undertaking".</p> <p>We have observed that it is only the "Production Access Group" who has admin rights in the production environment</p> <p>We have observed that, to get access to the production environment, the access has to be done by special workstations with certificates.</p>	No deviations identified.

A.9: Access Control		
Control Objective <ul style="list-style-type: none"> To restrict access to information and information processing facilities. GDPR article 28(3), para c. To ensure access for authorised users and prevent unauthorised access to systems and services. GDPR article 28(3), para c. To make users responsible for securing their authentication information. When the customer's Whistleblower system is in production, it is only the customer who can see the data. We have tested access from the Processor to selected customers.</p> <p>We have observed that procedures are implemented to secure transfer of sensitive information.</p>	No deviations identified.
Electronic messaging <ul style="list-style-type: none"> Procedures have been implemented that restrict the use of electronic messaging to specific messaging software and ensure that sensitive data is transferred securely. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Non-disclosure Undertaking".</p> <p>We have observed that the Processor is using internal encryption keys to ensure that data are transferred securely.</p>	No deviations identified.

A.13: Communications security**Control Objective**

- *To ensure protection of network information and supportive information processing facilities. GDPR Article 28(3), para c.*
- *To maintain information security when transferring internally in an organisation and to an external entity. GDPR Article 28(3), para c.*

Control Activity**Confidentiality or non-disclosure agreements**

- The employees are bound by non-disclosure undertakings.

Test performed by BDO

We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy", "Code of Good Information Security Behavior" and "Non-disclosure Undertaking".

We have observed that all employees have signed the "Non-disclosure Undertaking" document.

Result of test

No deviations identified.

A.14: System acquisition, development and maintenance**Control Objective**

- To ensure that information security is an integral part of information systems throughout the life cycle. This also includes the requirements for information systems that provide public network services. GDPR article 25.
- To ensure that information security is organised and implemented within the information systems development life cycle. GDPR article 25.
- To ensure the protection of data used for testing. GDPR article 25.

Control Activity	Test performed by BDO	Result of test
Information security requirements analysis and specification <ul style="list-style-type: none"> • Procedures have been implemented to ensure that information security requirements are assessed when acquiring new systems or upgrading existing systems with information security implications. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that the "IT Security Committee" reviews systems before upgrading existing systems for information security implications and that the group reviews the important software etc. We refer to section "Operations security - Information systems audit considerations".</p> <p>We have for one sample inspected documentation for assessment of information security requirements when acquiring a new system.</p>	No deviations identified.
Securing applications services on public networks <ul style="list-style-type: none"> • Only secure application services on public networks are used regarding operations with information security impact. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have inspected the Inventory of Information Assets together with the "Infrastructure Group" and observed that the Processor only use secure application services on public networks.</p>	No deviations identified.
Secure development policy <ul style="list-style-type: none"> • A secure development policy has been implemented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that a secure development policy and change management procedure have been implemented. We have observed that each development project is documented in the project management system.</p>	No deviations identified.

A.14: System acquisition, development and maintenance

Control Objective

- To ensure that information security is an integral part of information systems throughout the life cycle. This also includes the requirements for information systems that provide public network services. GDPR article 25.
- To ensure that information security is organised and implemented within the information systems development life cycle. GDPR article 25.
- To ensure the protection of data used for testing. GDPR article 25.

Control Activity	Test performed by BDO	Result of test
System change control procedures <ul style="list-style-type: none"> • Change management procedures have been implemented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that all changes are documented in the version control system where you can see what have been changed, by whom and when, so it will be possible to roll back in case of bugs etc.</p>	No deviations identified.
Technical review of applications after operating platform changes <ul style="list-style-type: none"> • Procedures have been implemented to ensure a technical review after operating platform changes. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that a procedure has been implemented for technical review after operating platform changes and the technical review is controlled and documented in the project management system. After each build release, a penetration test is done - recently for version 1.43.</p>	No deviations identified.
Restrictions on changes to software packages <ul style="list-style-type: none"> • No changes are made in third party software packages. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that no changes are made in third party software packages. We have inspected the Inventory of Information Assets.</p>	No deviations identified.
Secure system engineering principles <ul style="list-style-type: none"> • A policy for secure system engineering principles have been implemented and communicated to the relevant employees. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p>	No deviations identified.

A.14: System acquisition, development and maintenance**Control Objective**

- To ensure that information security is an integral part of information systems throughout the life cycle. This also includes the requirements for information systems that provide public network services. GDPR article 25.
- To ensure that information security is organised and implemented within the information systems development life cycle. GDPR article 25.
- To ensure the protection of data used for testing. GDPR article 25.

Control Activity	Test performed by BDO	Result of test
	We have observed that a policy for secure system engineering principles is implemented and communicated to the relevant employees by interview of an employee.	
Secure development environment <ul style="list-style-type: none"> • Confidential data is not used in the development and test environments. • Appropriate measures implemented to protect source code. • Source code versioning tool implemented. • Back up of source code. • Least privilege principle implemented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed, that:</p> <ul style="list-style-type: none"> • The Processor does not use confidential data in the development and test environments. • Appropriate measures are implemented to protect the source code. • A source code versioning tool is implemented. • The source code is backed up. • Least Privilege principle for the employees is implemented, we have seen the difference for Remote Desktop Access for a developer and for access to the production environment. 	No deviations identified.
System security testing <ul style="list-style-type: none"> • Before deploying a new version to the production environment, system changes are tested thoroughly. • After each deployment of a new build in the production environment, an internal penetration test is conducted and documented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that before deploying of a new version (build) to the production environment, the system changes are tested thoroughly first by the developer. Then the developer commits the changes to the version control system and updates the status in the project management system. Then the change is committed to the test server and the tester(s). After approval, the tester registers the approval in the project management system.</p>	No deviations identified.

A.14: System acquisition, development and maintenance**Control Objective**

- To ensure that information security is an integral part of information systems throughout the life cycle. This also includes the requirements for information systems that provide public network services. GDPR article 25.
- To ensure that information security is organised and implemented within the information systems development life cycle. GDPR article 25.
- To ensure the protection of data used for testing. GDPR article 25.

Control Activity	Test performed by BDO	Result of test
System acceptance testing <ul style="list-style-type: none"> • Before deploying a new build to the production environment, a system acceptance test is conducted and documented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that:</p> <ul style="list-style-type: none"> • When a tester has approved the change, then the next step is to perform an acceptance test. If the acceptance test is ok, the test is stored in the build folder. • Before the build is ready to deploy in the production environment, the change must be reviewed and approved by a reviewing developer. <p>We have observed that after deployment of a new build in the production environment an internal penetration test is conducted and documented in the recent builds 1.43.</p>	No deviations identified.
Protection of test data <ul style="list-style-type: none"> • No sensitive data (including data from the production environment) are used in the test environment, hence no special requirements to protect the data. However, only employees required to access the test environment have access to test data. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that no sensitive data are used in the test environment, and that it is only employees requiring access that have access to the test environment, Remote Desktop Access manages access to the test environment.</p>	No deviations identified.

A.15: Supplier relationships		
Control Objective <ul style="list-style-type: none"> To ensure protection of the organisation's assets that suppliers have access to. GDPR article 28(2), article 28(3), para d, article 28(4). To maintain an agreed level of information security and delivery of services under the supplier agreements. GDPR article 28(2), article 28(3), para d, article 28(4). 		
Control Activity	Test performed by BDO	Result of test
Information security policy for supplier relationships <ul style="list-style-type: none"> An information security policy for supplier services have been implemented. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that the Processor has an implemented security policy for supplier services.</p>	No deviations identified.
Sub-processors and instructions <ul style="list-style-type: none"> In the use of sub-processors, the Processor makes a data processing agreement which imposes data protection obligations on the sub-processor so that they meet the requirements in the GDPR. The Processor carries out an annual supervision by obtaining and reviewing auditor's reports, certifications, etc. of the Processors. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that the Processor has an implemented security assessment policy for new suppliers where information security implications are conducted and the implications are handled in the contract.</p> <p>We have inspected the agreement between the Processor and the following hosting providers: Cogeco Peer 1, Microsoft Azure, ComText A/S, and Supertel A/S.</p>	No deviations identified.
Information and communication technology supply chain <ul style="list-style-type: none"> The audit reports from the hosting providers have been reviewed. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have inspected that the Processor has reviewed the audit reports from the above-mentioned hosting providers.</p>	No deviations identified.
Monitoring and review of supplier services <ul style="list-style-type: none"> Review of audit reports of suppliers that supply services with information security implications. Monitoring of relevant delivered services. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that the Processor has reviewed the audit report from the hosting providers.</p>	No deviations identified.

A.15: Supplier relationships**Control Objective**

- To ensure protection of the organisation's assets that suppliers have access to. GDPR article 28(2), article 28(3), para d, article 28(4).
- To maintain an agreed level of information security and delivery of services under the supplier agreements. GDPR article 28(2), article 28(3), para d, article 28(4).

Control Activity	Test performed by BDO	Result of test
	<p>We have been informed that following suppliers are allowed access to the Processor's IT systems and infrastructure regarding the Whistleblower system:</p> <ul style="list-style-type: none"> • Microsoft Azure Germany - hosting Whistleblower system in Europe (data encrypted). • Cogeco Peer 1 - hosting Whistleblower system in Canada (data encrypted). • ComText A/S - provider of translation services. <p>We have observed the Processor's monitoring of delivered services in the diagnostic system. Further we have observed that a loud alert alarm informs the employees if there is a service they have to take care of.</p>	
Managing changes to supplier services <ul style="list-style-type: none"> • Policy implemented to ensure information security assessments are conducted when changes are made in supplier contracts with suppliers with information security implications and any implications are handled in the contract. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy".</p> <p>We have observed that the Processor has implemented a policy to ensure information security assessment are conducted when changes are made in supplier contracts with suppliers with Information security implications and any implications are handled in the contract.</p> <p>We have inspected the agreements with addendums between the suppliers and observed that they have non-disclosure agreements in place.</p>	No deviations identified.

A.16: Information security incident management**Control Objective**

- To ensure a uniform and effective method of managing information security breaches, including communication on security incidents and weaknesses. GDPR article 33(2).

Control Activity	Test performed by BDO	Result of test
Responsibilities and procedures <ul style="list-style-type: none"> Procedures have been implemented to ensure fast, efficient handling of information security incidents. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Code of Good Information Security Behavior".</p> <p>We have observed that the Processor has implemented a procedure to handle information security incidents.</p>	No deviations identified.
Reporting information security events <ul style="list-style-type: none"> Guidelines to reporting information security incidents have been implemented and communicated to the employees. It is part of the standard data processing agreement that customers shall inform Got Ethics A/S in case they suspect an information security incident has occurred. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Code of Good Information Security Behavior".</p> <p>We have observed that:</p> <ul style="list-style-type: none"> In "Code of Good Information Security Behavior" is a guideline for reporting information security incidents; we have observed that all employees have signed this document. It is a part of the standard data processing agreement with the customers that the customers shall inform the Processor if any suspect information security incidents occur. 	No deviations identified.
Reporting information security weaknesses <ul style="list-style-type: none"> Guidelines to reporting information weaknesses have been implemented and communicated to the employees. Assistance - compliance with special obligations <ul style="list-style-type: none"> The Processor has an obligation according to the data processing agreements to assist the Controllers with their obligations according to articles 32 to 36. 	We have made inquiries of relevant personnel and inspected the standard template for a data processing agreement and a test sample of a data processing agreement made.	No deviations identified.
Assistance - audit and inspection <ul style="list-style-type: none"> The Processor has an obligation according to the data processing agreements to obtain an ISAE 3000 report annually for the purpose of the Controller's inspection of the Processor. 	We have made inquiries of relevant personnel and inspected the standard template for a data processing agreement and a test sample of a data processing agreement made.	No deviations identified.
Deletion and/or return of customers data <ul style="list-style-type: none"> The Processor deletes and/or returns personal data in accordance with the data processing agreement made. 	<p>We have made inquiries of relevant personnel and inspected the standard template for a data processing agreement and a test sample of a data processing agreement made.</p> <p>We observed for a single test sample that customer data is deleted at the request of the customer, at the latest three months after expiry of the software license agreement.</p>	No deviations identified.

App Reporting Channel		
Control Objective <ul style="list-style-type: none"> To ensure secure capture, storage and processing of incidents via the smartphone apps for iPhone and Android (GDPR Article 28, section 3, letter c). 		
Control Activity	Test performed by BDO	Result of test
Implementation of appropriate security measures <ul style="list-style-type: none"> Incidents that have been sent to the case management system and are encrypted at rest in the same way as the incidents submitted from the web portal. Encryption of information in transit. Brute force protection to access the app. No information stored inside the app - only on the production server. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Processing Operations".</p> <p>We have observed that the incident from the app reporting channel are submitted to the case management system and are encrypted in the same way as the incidents submitted from the web-portal on the server at Microsoft Azure in Germany or Cogeco in Canada.</p> <p>We have observed that the transfer of data between the client and the server is SSL encrypted. The data are encrypted while at rest in the database in the Whistleblower system and cannot be read/decrypted by the Processor.</p> <p>We have together with "Production Environment Access Group" observed the security for Brute force protection to access the App Reporting Channel.</p> <p>We have downloaded the app and used the app as a test.</p> <p>We have observed that no information is stored inside the app - only at the production servers in Germany or in Canada.</p>	No deviations identified.

Phone Hotline		
Control Objective <ul style="list-style-type: none"> To ensure secure capture, storage and processing of incidents (voice messages) via the phone hotline solution (GDPR Article 28, section 3, letter c). 		
Control Activity	Test performed by BDO	Result of test
Implementation of appropriate security measures <ul style="list-style-type: none"> Voice messages are recorded directly to the case management system and are encrypted in the same way as the incidents submitted from the web portal. Voice messages are obfuscated to hide the identity of the whistleblower. Microsoft Speech API. No trace. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Inventory of Processing Operations".</p> <p>We have observed that the Voice messages are recorded directly to the case management system and are encrypted in the same way as the incidents submitted from the web portal.</p> <p>We have observed that the voice messages are obfuscated to hide the identity of the whistleblower.</p> <p>We have reviewed the agreement between the Processor and Supertel A/S regarding hosting of Supertel SIP trunk inclusive Voice Traffic. The voice messages are handled at the Supertel Broad soft VoIP platform.</p> <p>We have received and inspected an ISAE 3402 type II Audit report from GlobalConnect A/S for the period 1 January to 31 December 2018 submitted by BDO dated 14 February 2018. The audit report is without qualification.</p> <p>We inspected system documentation for Microsoft Speech API.</p>	No deviations identified.

Translation Service		
Control Objective <ul style="list-style-type: none"> To ensure that all information processed by translators are processed in a secure manner (GDPR Article 28, section 3, letter c). 		
Control Activity	Test performed by BDO	Result of test
<p>Implementation of appropriate security measures</p> <p><u>Manual Translation</u></p> <ul style="list-style-type: none"> All processing is performed within Got Ethics A/S' IT infrastructure. Not possible to transfer information to outside Got Ethics' IT infrastructure. Information in transit is SSL encrypted. Information is encrypted while at rest. 2-factor authentication with SMS code to access the translation web portal. Brute force protection to remote desktop connection (storing and translation of files). File deletion policy. <p><u>Machine Translation</u></p> <ul style="list-style-type: none"> Microsoft Translator Text API v3. No trace. 	<p>We have made inquiries of relevant personnel and inspected system descriptions of procedures, control objectives and controls, "Information Security Policy" and "Policy for use of Cryptographic Controls".</p> <p>We have inspected the agreement between the Processor and ComText A/S.</p> <p>We have tested the TranslationWeb functionalities by being created as a translator and assigned test translations of plain text and attachment and observed that:</p> <ul style="list-style-type: none"> All the processing regarding the translation is performed within the Processor's IT infrastructure. It is not possible to transfer information to outside the Processor's IT infrastructure. The information is SSL encrypted in transit and while at rest. The Processor use 2-factor authentication with SMS code to access the translation Web Portal. There is Brute force protection to remote desktop connection in the process of translation. The translator has no access to the translated file after it is sent to client. <p>We have together with the "Cryptographic Key management Group" observed the configuration.</p> <p>We inspected system documentation for Microsoft Translator Text API v3.</p>	<p>No deviations identified.</p>

BDO Statsautoriseret revisionsaktieselskab
